

## ***PARTNERING WITH DRILLING CONTRACTORS***

We understand the extraordinary limitations and unique requirements for successfully executing deep water drilling programs in harsh environments. LinRich Solutions provides technical assurance that your pressure control equipment and operating procedures are designed and configured to ensure full compliance with your requirements and those of your customers. We have the experience to facilitate collaboration within the various multi-discipline teams of your organization and those of your well operating clients, ensuring that the requirements of each stakeholder are addressed. We are experts in semisubmersible and drill ship pressure control systems design, trouble shooting and best practices implementation.

**CHALLENGE** – A Drilling Contractor needed help evaluating BSEE’s recent Proposed Ruling on pressure control equipment and the impact the Ruling will have on their fleet of drill ships and semi-submersibles.

**SOLUTION** – We conducted a gap analysis by reviewing BSEE’s proposed changes and compared them to API. We then looked at the impact the Ruling would have on each rig. This allowed the Client to adjust their portfolio to the market accordingly.

*"For your most challenging deepwater pressure control equipment challenges, put LinRich Solutions to the test"*
